

# Versatility, quality and speed – the best in economical printing

Compact size

Easy operation

The affordable printing solution

## High speed 130ppm output

With a print speed of 130 pages per minute you can make short work of the largest job: a 500 sheets print run takes less than four minutes to finish, so you can print tests for a whole school or fliers for an announcement campaign in an incredibly short time.

Time to print 500 copies

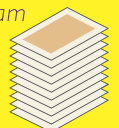

## A3 scanning and A3 paper path

Although the maximum print area is B4, you can scan A3 originals for reduction to B4 size. Better still, since the paper path handles A3 paper, you can print on A3 or non-standard paper sizes larger than B4.

## Auto document feeder (ADF)

The ADF has a capacity of ten sheets and works in conjunction with program print to give you unprecedented versatility. For example, if you are printing different materials for several classes, each with different numbers of students, you simply set your originals, program the number of copies for each one, and press print to automatically get your desired number of copies for each of the different originals.

## 1,000 sheet capacity

The paper feed tray holds up to 1,000 sheets (depending on paper weight) to allow long, uninterrupted print runs.
